

CASE STUDY A01 – ACOUSTIC REPLACEMENT

EALING STUDIOS, LONDON

1 no. SOUNDROLL 30

When the existing twin vertical lift acoustic doors had reached the end of their serviceable life, the **Soundroll 30** acoustic roller shutter from SAFE-door Industries Ltd proved the most straightforward and affordable solution for the replacement external stage access.

A bespoke canopy was required due to fixed steelwork supporting an overhead walkway which could not be moved, however this was no problem for the SAFE-door Industries Ltd engineering team or for the adaptable **Soundroll** design.

The **Soundroll** range of acoustic roller shutters is available with tested performances of Rw30dB, Rw31dB (with an optional 60 minute Fire Rating) and the tandem model **Soundroll 53** offering attenuation of Rw53dB (also available with an optional 60 minute Fire Rating).
