

CASE STUDY T02 – THERMAL NEW BUILD

GRESSINGHAM FOODS, DISS, NORFOLK

5 no. THERMASTER / 3 no. THERMACHILL / 1 no. THERMASPEED

SAFE-door Industries Ltd have recently completed the installation of 9 no. high-speed temperature-controlled doors from the **Thermal Solutions** family at the home of a well-known poultry producer in East Anglia, who were expanding their operations with the creation of an on-site distribution centre and associated storage facilities.

The East Anglian poultry producer's new-build distribution and storage operation required a number of freezer, chill and ambient doors of the highest standard to ensure that their new facility ran as efficiently as possible. SAFE-door Industries Ltd were awarded the specialist rapid roll doors contract following a competitive tendering process against a number of competitors, and the availability of vision panels providing additional safety as well as the flexibility of colour choices for frames and curtains were highlighted as key benefits over doors from other suppliers.

The adaptability of the **Thermal Solutions** design was further demonstrated when the client requested to change the activation method from embedded induction loops in the floors to a combination of pull cords, motion detectors and infra-red remote controls. This line-of-sight system enables the operation of multiple doors with a simple one-button handset. With the flexibility of activation options built-in to each door's controller as standard, all that was required was a change to the hardware supplied, quick on-site programming, and the doors worked to the new specification.
